

Global Superstore Sales & Profit Analytics

Business Insights & Power BI Project Summary

Project Overview

An interactive four-page Power BI reporting solution built to analyze Global Superstore sales, profitability, customers, products, segments, markets and geographic performance.

Key Performance Indicators

KPI	Value
Total Sales	13M
Total Profit	1.47M
Profit Margin	12%
Average Order Value	505.01
Total Customers	5K
Total Orders	25K
Total Products	10K

Dashboard Structure

- **Page 1 — Executive Sales Dashboard:** Overall view of sales, profit, customers, orders, products, markets, regions and categories.
- **Page 2 — Customer & Products Analysis:** Customer rankings, product performance, segment analysis and market performance.
- **Page 3 — Sales & Profit Analysis:** Monthly sales and profit trends with category-level sales and profitability.
- **Page 4 — Geographic & Market Analysis:** Geographic and market-level performance for regional comparison and opportunity identification.

Key Analytical Areas

- Sales and profit performance
- Monthly sales and profit trends
- Category-level sales and profitability
- Customer and product ranking
- Segment and market comparison
- Geographic performance
- KPI monitoring and interactive filtering

Power BI & DAX Approach

Power Query is used for data preparation, Power BI is used for modeling and visualization, and DAX measures support dynamic KPI calculations. The report applies filter context, time-based analysis and interactive filtering to explore performance across business dimensions.

Core Measures / KPIs

Total Sales, Total Profit, Total Customers, Total Orders, Total Products, Profit Margin and Average Order Value.

Business Value

The project demonstrates an end-to-end analytics workflow: transforming transactional data into management-ready KPIs, interactive visual analysis and decision-support reporting across customers, products, categories, markets and geography.

Recommended Business Use

- Monitor overall commercial performance using executive KPIs.
- Use customer and product rankings to identify high-value accounts and products requiring attention.
- Compare category and segment sales contribution with profitability.
- Use monthly trends to identify performance changes requiring investigation.
- Use geographic and market analysis to compare regional performance and prioritize opportunities.

Project Scope & Limitation

This is a portfolio analytics project based on the Global Superstore dataset. The KPI values reflect the current dashboard snapshot. Any business recommendation should be validated against the underlying transaction-level data and current business context before operational use.

Portfolio Deliverables

GitHub repository: [dataanalyst-solutions/global-superstore-powerbi-dashboard](#)

Deliverables: Power BI PBIX file, four dashboard screenshots and this business insights document.
